

Coating Glass

Coating Glass is made by printing ceramic paint on float glass, and melting the paint into glass surface through tempering furnace. Afterward, Coating Glass with the feature of steady and non-fading color, as well as rich colors is finally made.

Low Temperature Coating Glass is the glass made by spraying normal paint on glass surfaces, and waiting the completion of natural air-dry.

Characteristics

1. Stable and various colors: It can mix and create out any colors depending on the design requirements, beautiful and various. The Coating Glass color is high stability because of it is colored by ceramic paints.
2. Energy-saving Coating glass can reduce air-conditioning cost by insulating solar heat.
3. Reducing the weight of construction material: It can substitute for stone, tile, metal plate, and reduce the load on the structure of curtain wall. Moreover, it is easy to construct.

Applications

- Curtain wall of building.
- Graphic glass of interior partition.
- Auto glass.
- Furniture glass and art glass.
- Art Glass.

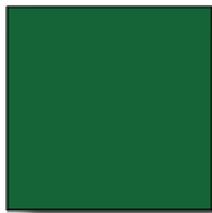

Specification

Glass Type	Material	Thickness(mm)	Max Size(mm × mm)	Min Size(mm × mm)
High Temperature Ceramic Paint	Ceramics paint vehicle	4 ~ 19	2000 × 3500	300 × 300

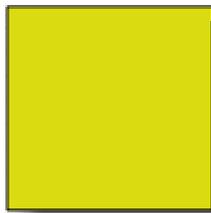

Glass Type	Material	Thickness(mm)	Max Size(mm × mm)	Min Size(mm × mm)
Low Temperature Baking Varnish	Generally paint vehicle	3 ~ 19	2438 × 3353	Unlimited

* If you have any other special size requirements, please [contact us](#).
